# Software Installation

Methods to install software

# dotNET

If using openSUSE Tumbleweed, installing via tarbell is the only method. More information can be found [here](#) where Microsoft won't add official support for fast rolling distros.

- Download the tarbell from Microsoft's website directly [x64](#)
- Copy the contents using root to `/usr/bin`
- dotNET should then be available when using `whereis dotnet`
